

Corporate Presentation
August 2019
TSX-V: RK

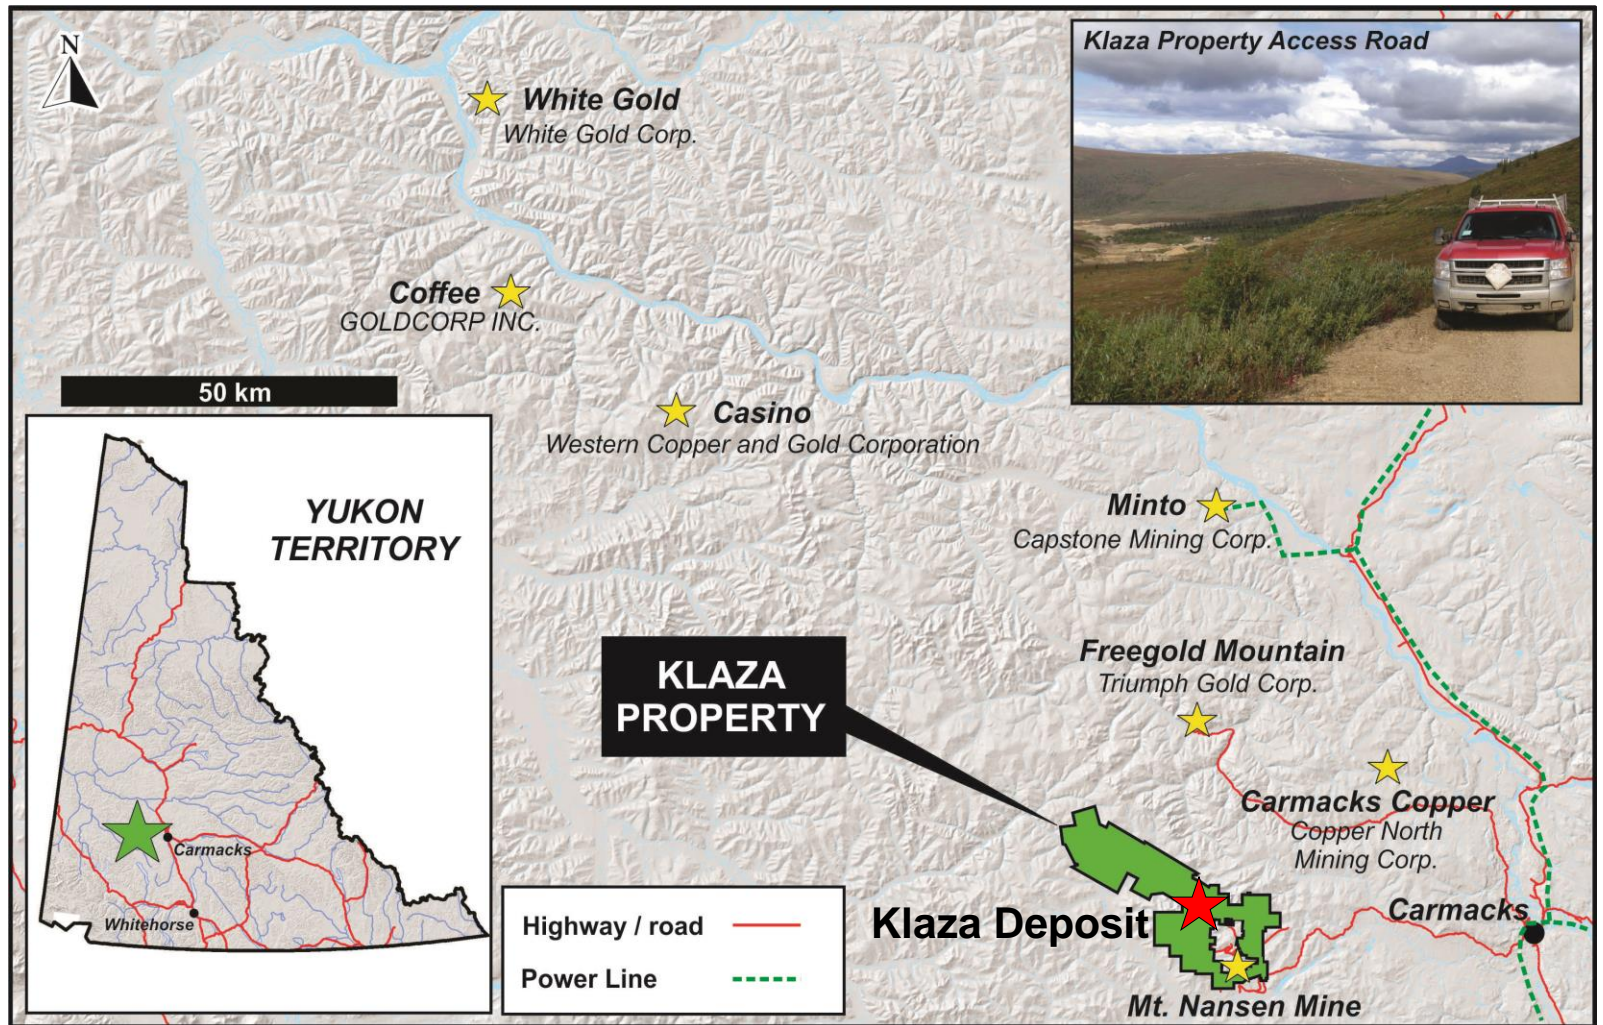

Rockhaven
RESOURCES LTD.

Certain information contained herein may constitute forward-looking statements within the meaning of applicable securities laws. Forward-looking statements may include estimates, plans, expectations, opinions, forecasts, projections, guidance or other statements that are not statements of fact. Although the Company believes that the expectations reflected in such forward-looking statements are reasonable, it can give no assurance that such expectations will prove to have been correct. The Company cautions the actual performance will be affected by a number of factors, many of which are beyond the Company's control, and that future events and results may vary substantially from what the Company currently foresees. Discussion of the various factors that may affect future results is contained in the Company's Annual Report which is available at www.sedar.com. The Company's forward-looking statements are expressly qualified in their entirety by the cautionary statement.

Additional information about the Klaza property is summarized in Rockhaven's August 2nd, 2018 technical report titled, "Technical Report Describing Updated Diamond Drilling, Metallurgical Testing and Mineral Resources on the Klaza Property, Yukon, Canada." which can be viewed at www.sedar.com under the Rockhaven profile or on the Rockhaven website at www.rockhavenresources.com.

The technical information in this presentation has been approved by Matthew R. Dumala, P.Eng., a geological engineer with Archer Cathro & Associates (1981) Limited and qualified person for the purpose of National instrument 43-101.

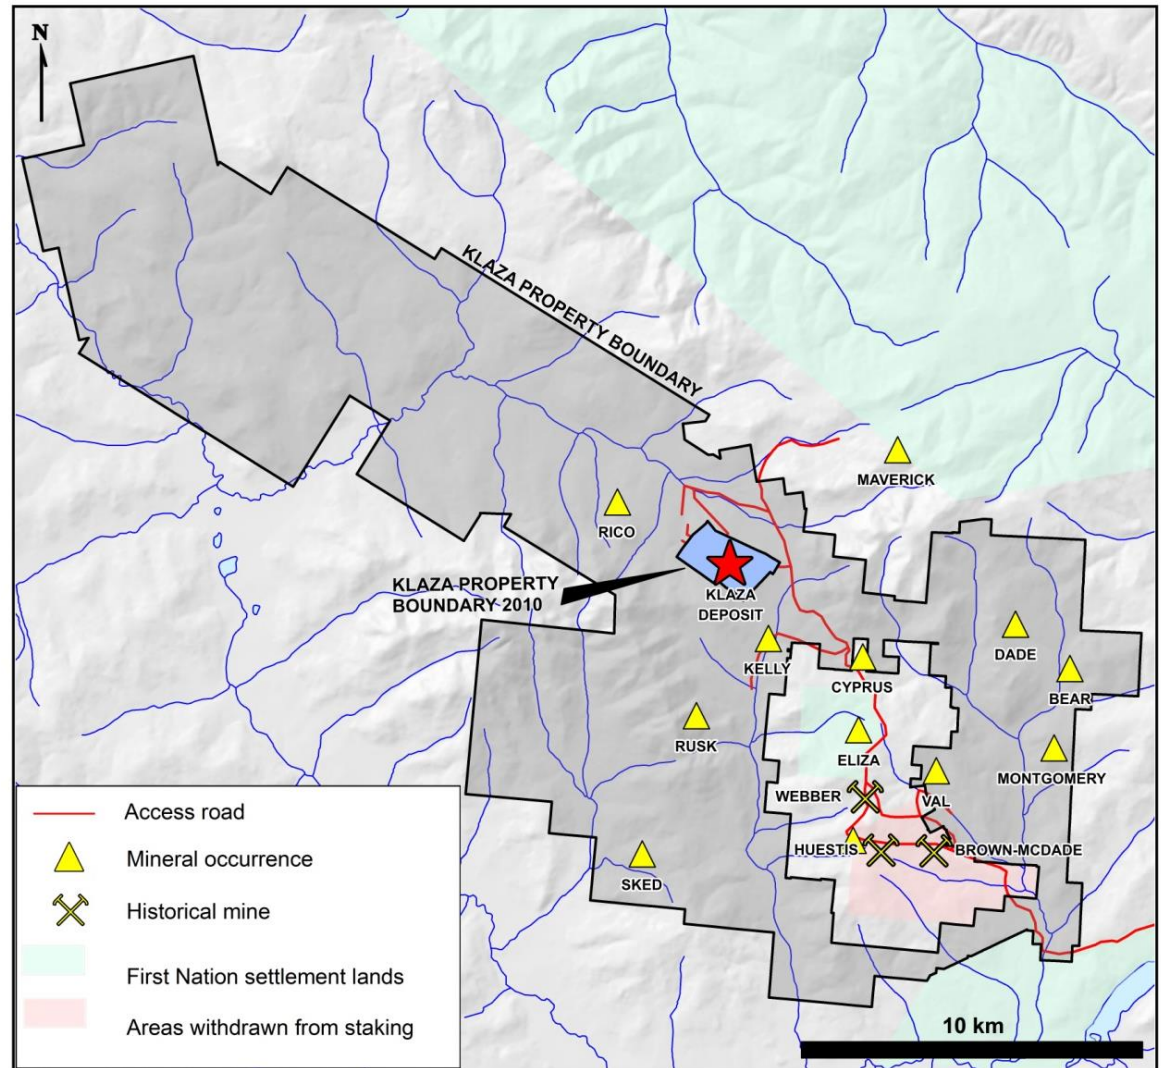

ROAD-ACCESSIBLE LOCATION

DEVELOPED AREA WITH EXCELLENT INFRASTRUCTURE

- 100% owned by Rockhaven with **no underlying royalties** on resource areas
- Property covers 287 sq kms
- 1,273 of the total 1,478 claims are unencumbered by royalties or interests
- Claims have been acquired patiently over time and in-line with our growing knowledge of the district

- 94,000 m of drilling in 434 holes completed between 2010 and 2017
- 24,000 m of excavator trenching
- Eleven structurally controlled zones with:
 - Good continuity
 - Mineralization traced from surface
 - Open ended strike lengths ranging between 250 and 2,400 m

MOUNT NANSEN GOLD BELT GEOLOGY

Aerial View of Klaza – Looking Southeast

- Local elevations range between 1,200 and 1,800 m
- Limited bedrock exposure
- Roads, an historical hard rock mine and numerous placer operations

Aerial View of Klaza – Looking Southeast

2017 Trench Discoveries
(Victoria Target)

2017 Drill Discoveries

Camp

- Eleven main mineralized structures identified to date
- Large Mineralizing System - 1.8 km wide by 2.5 km long
- Porphyry to epithermal transition model
- Grades generally increase towards the west

DISTAL EPITHERMAL VEIN MINERALIZATION

94.09 g/t gold, 545 g/t silver, 2.86% lead and 4.21% zinc over 2.63 m

KL-17-401

Klaza Property - Total Inferred and Indicated Mineral Resource Estimate Summary

Category	Tonnes (kt)	Grade					Contained Metal				
		Au (g/t)	Ag (g/t)	Pb (%)	Zn (%)	Au EQ ⁴ (g/t)	Au (koz)	Ag (koz)	Pb (klb)	Zn (klb)	Au EQ ⁴ (koz)
Indicated											
Pit- Constrained^{2,3}	2,447	5.3	90	0.7	1.0	6.7	414	7,096	39,143	52,935	529
Underground³	2,010	4.2	108	0.8	0.9	5.8	272	6,974	34,125	39,172	378
Total	4,457	4.8	98	0.7	0.9	6.3	686	14,071	73,268	92,107	907
Inferred											
Pit- Constrained^{2,3}	1,754	2.6	43	0.4	0.5	3.3	147	2,429	14,897	18,599	187
Underground³	3,960	2.8	90	0.7	0.8	4.2	359	11,472	62,647	70,578	538
Total	5,714	2.8	76	0.6	0.7	3.9	507	13,901	77,544	89,176	725

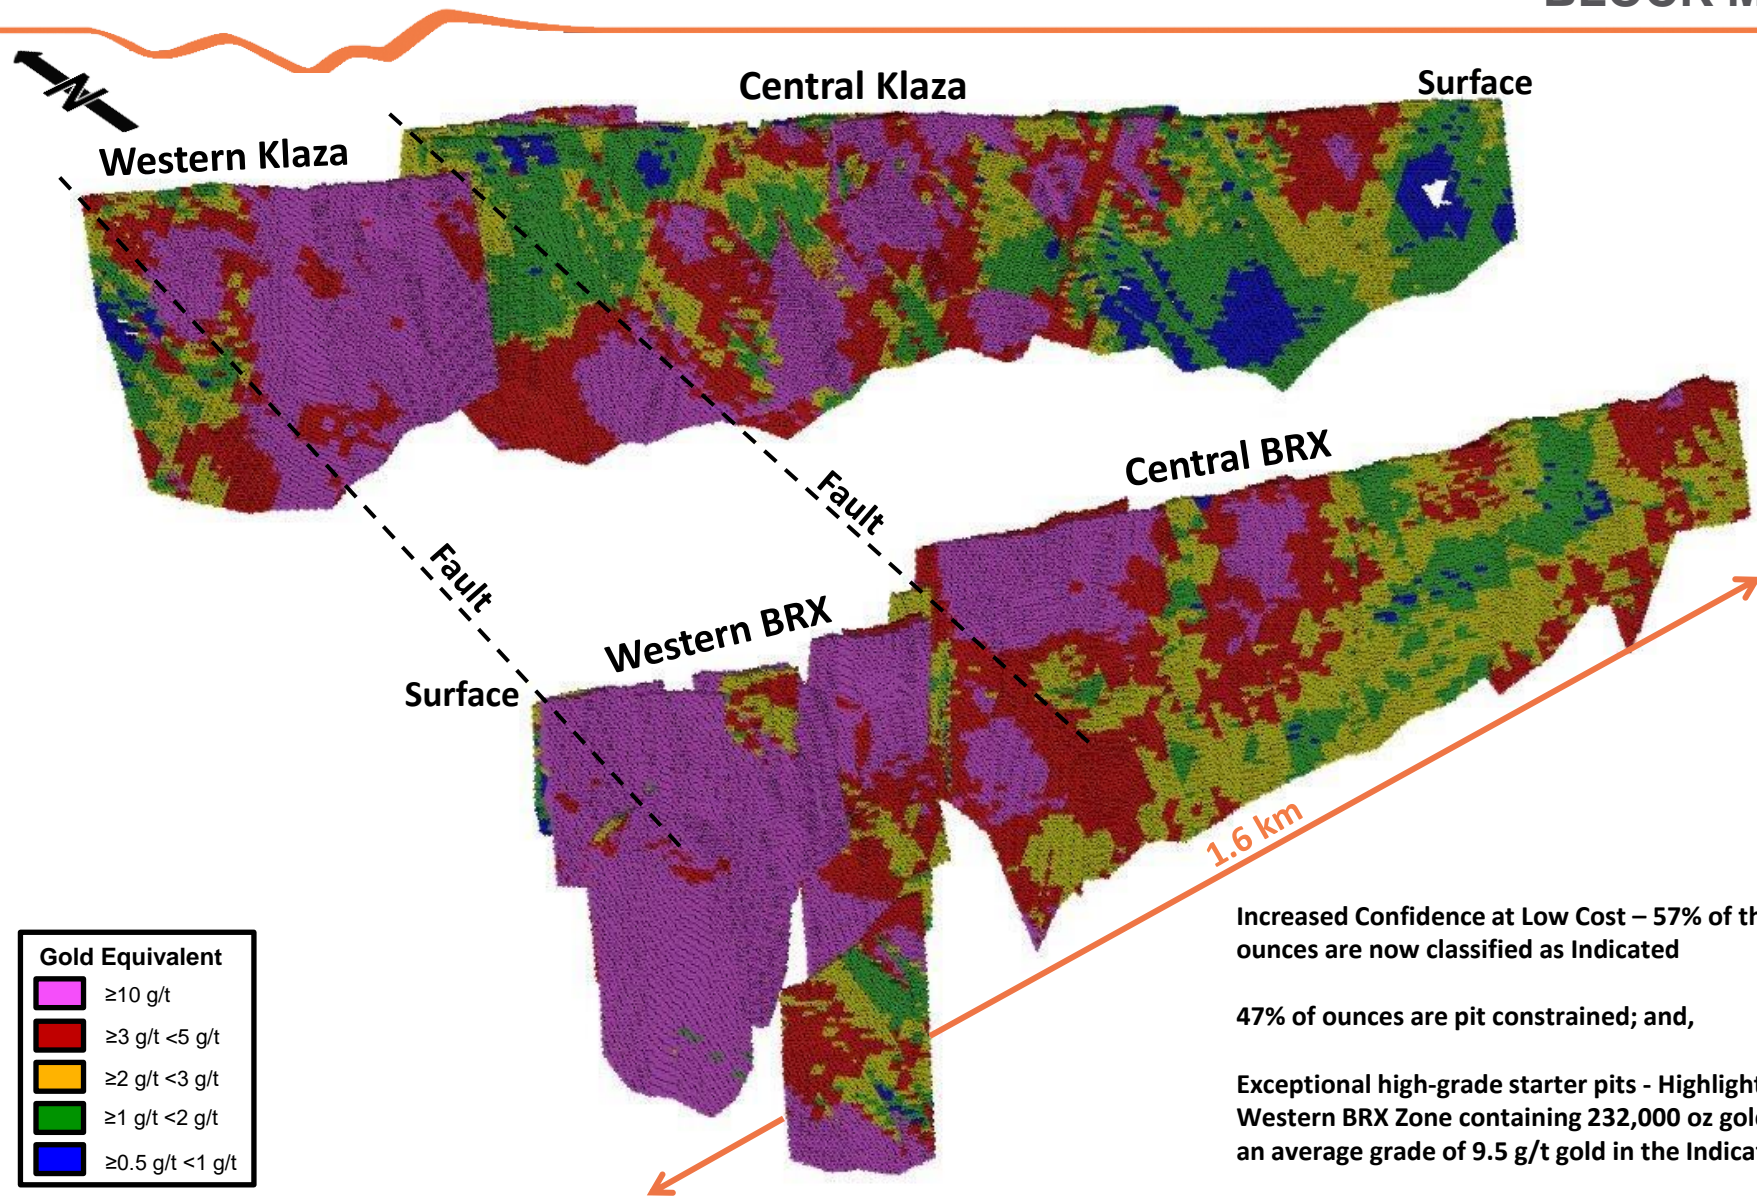

¹ CIM Definition Standards (2014) were used for reporting the Mineral Resources. Using drilling results to December 31, 2017. The Qualified Persons are Adrienne Ross, P.Geo. of AMC Mining Consultants (Canada) Ltd, and Nicholas Ingvar Kirchner, FAusIMM, MAIG. of AMC Mining Consultants Pty Ltd.

² Near surface Mineral Resources are constrained by an optimized pit shell at a metal prices of \$1,400/oz Au, \$19/oz Ag, \$1.10/lb Pb, and \$1.25/lb Zn.

³ Cut-off grades applied to the pit-constrained and underground resource are 1.0 g/t and 2.3 g/t AuEQ respectively.

⁴ Gold equivalent values assume \$1,400/oz Au, \$19/oz Ag, \$1.10/lb Pb, and \$1.25/lb Zn, and variable recoveries for the different metals.

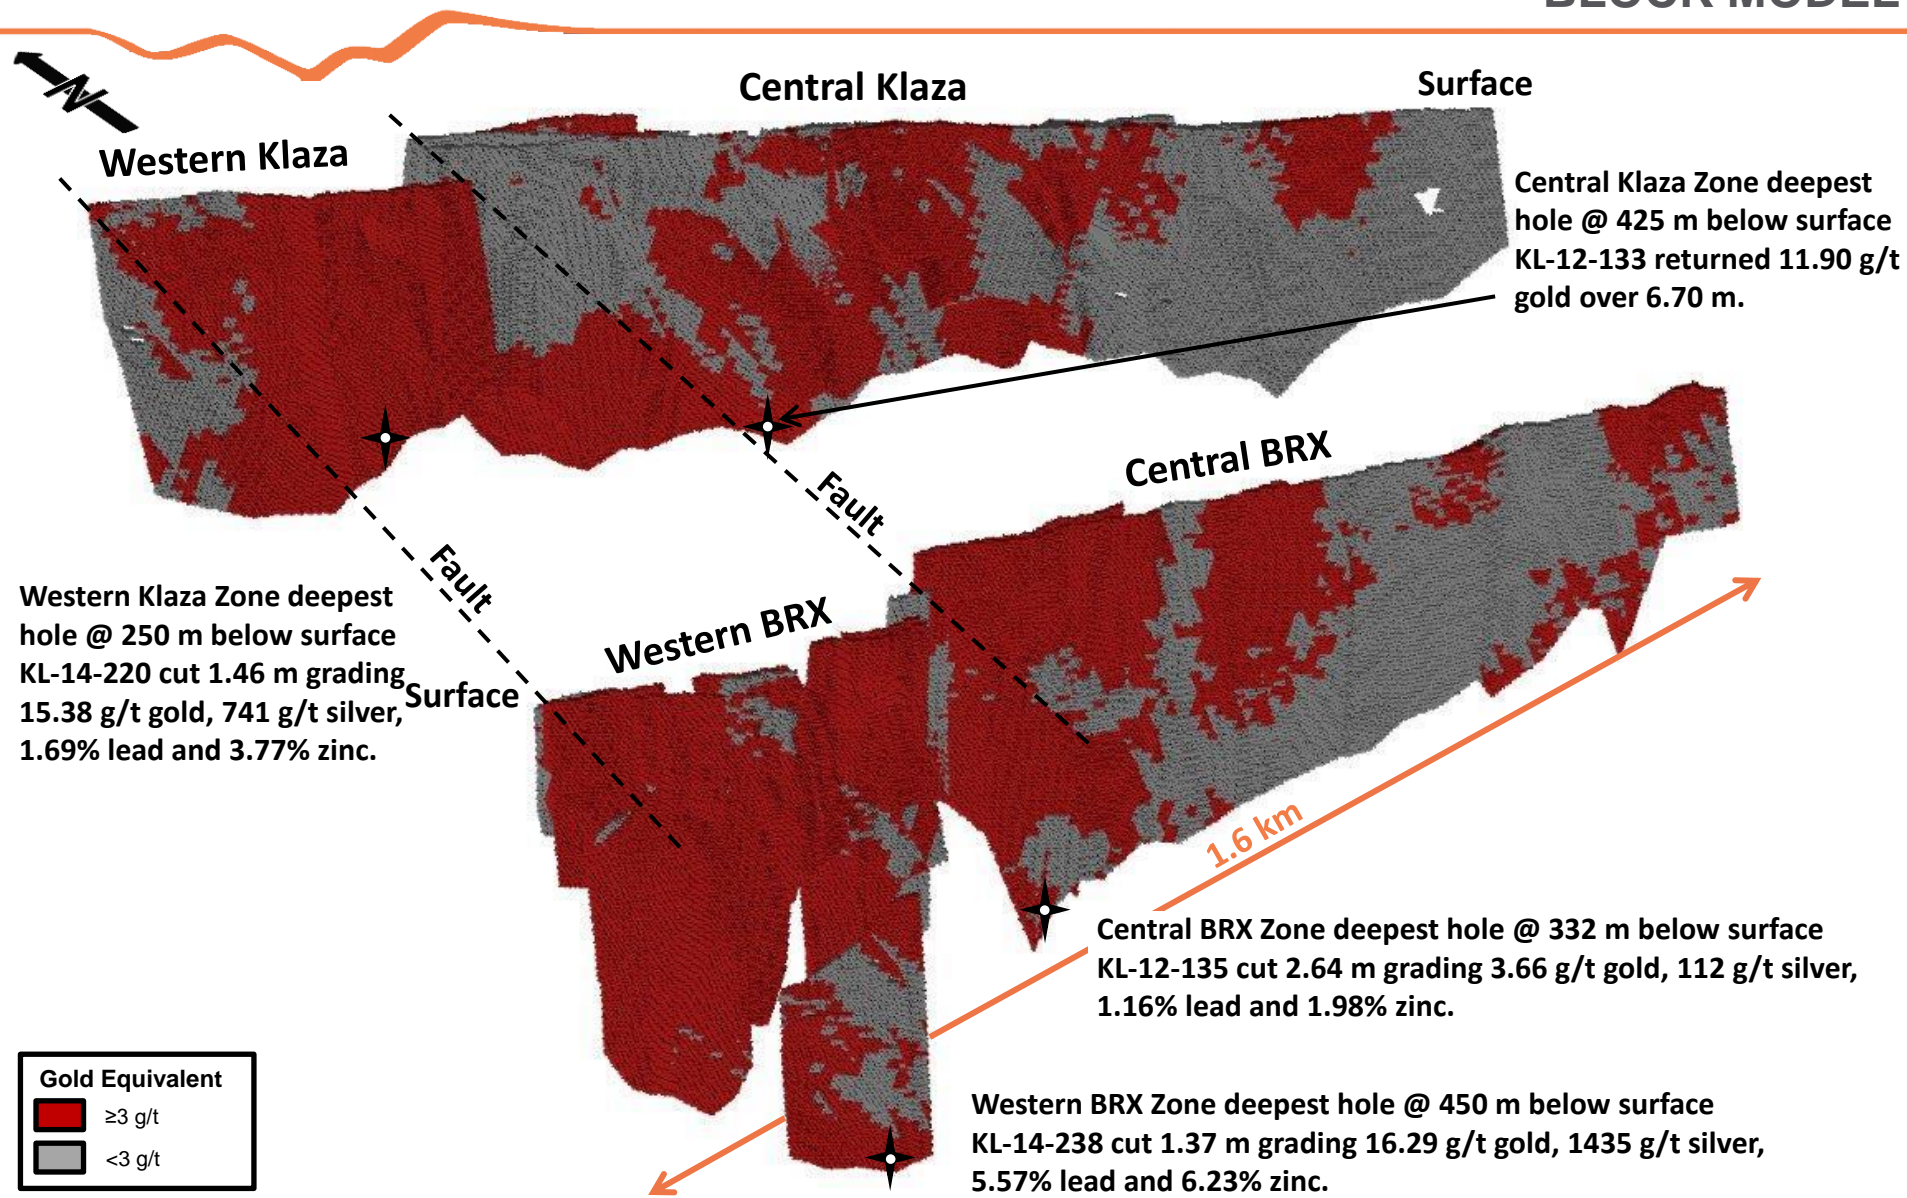

⁵ Numbers may not add up due to rounding. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. All metal prices are quoted in US\$ at an exchange rate of \$0.80 US to \$1.00 Canadian.

Increased Confidence at Low Cost – 57% of the total gold ounces are now classified as Indicated

47% of ounces are pit constrained; and,

Exceptional high-grade starter pits - Highlighted by the Western BRX Zone containing 232,000 oz gold in 759 kt at an average grade of 9.5 g/t gold in the Indicated category

Crushing & Grinding 1,500 tpd

- High recovery of all metals to three separate concentrates
- Hydro-metallurgical circuit is small (~200 t/day)
- Concentrate marketing analysis done in conjunction with metallurgy and shows concentrates are marketable
- Comprehensive pre-concentration studies have been completed and show the potential to increase head-grade to mill and reduce mill and circuit size

**94% Au Recovery
87% to Doré**

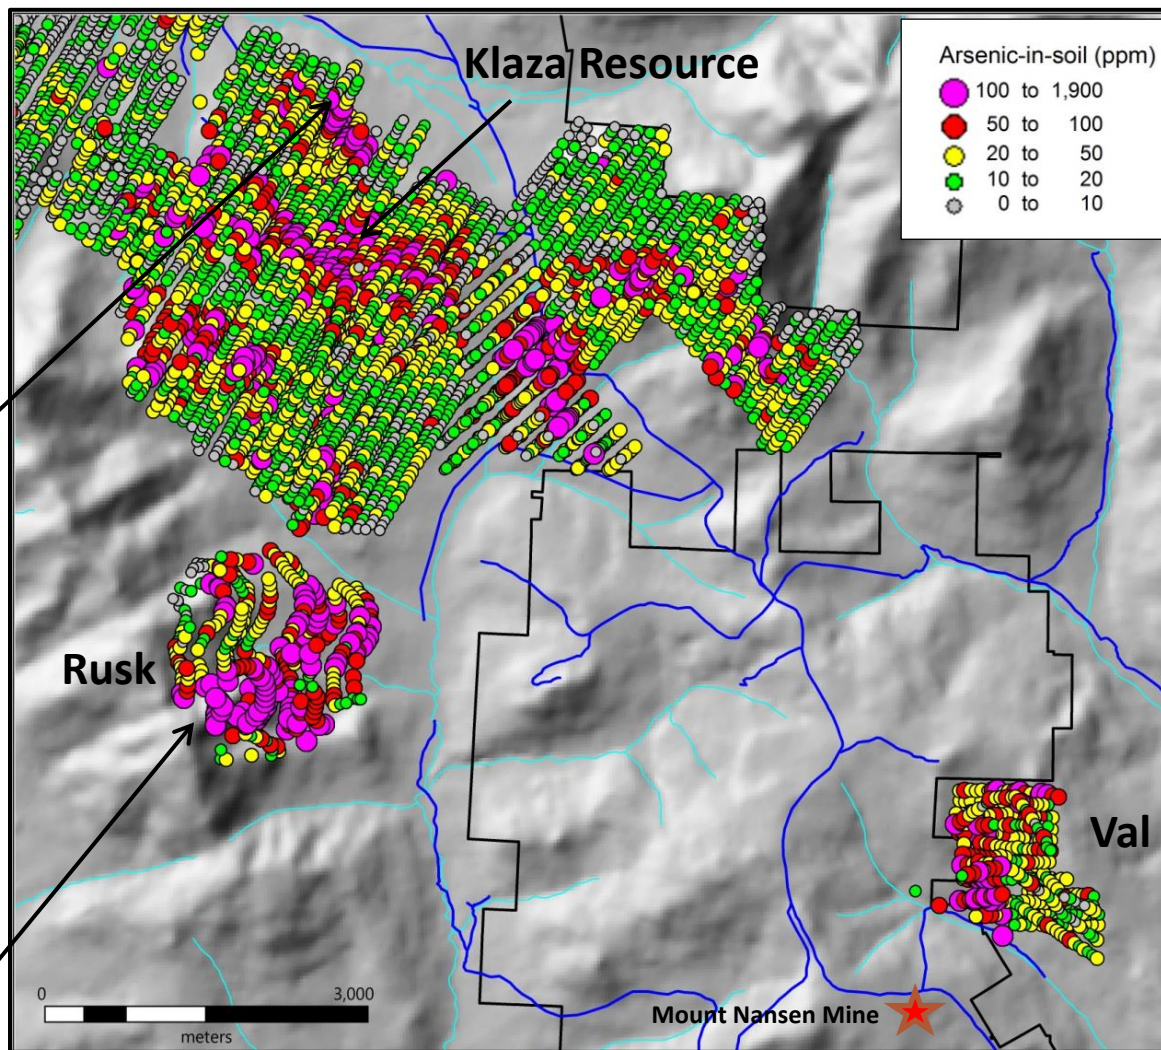

POTENTIAL FOR NEW MAJOR DISCOVERIES

- New mineralized zones discovered in exploration drill holes in 2017

Results include:

- 1.16 g/t gold and 18.7 silver over 10.12 m (drill)
- 12.60 g/t gold and 312 g/t silver over 0.46 m (drill)
- 9.43 g/t gold and 180 g/t silver over 0.86 m (drill)

- Numerous targets exist outside of the main resource area
- Rusk Target - 2.6 Km² soil geochemical anomaly (Au, Ag, Sb and As)

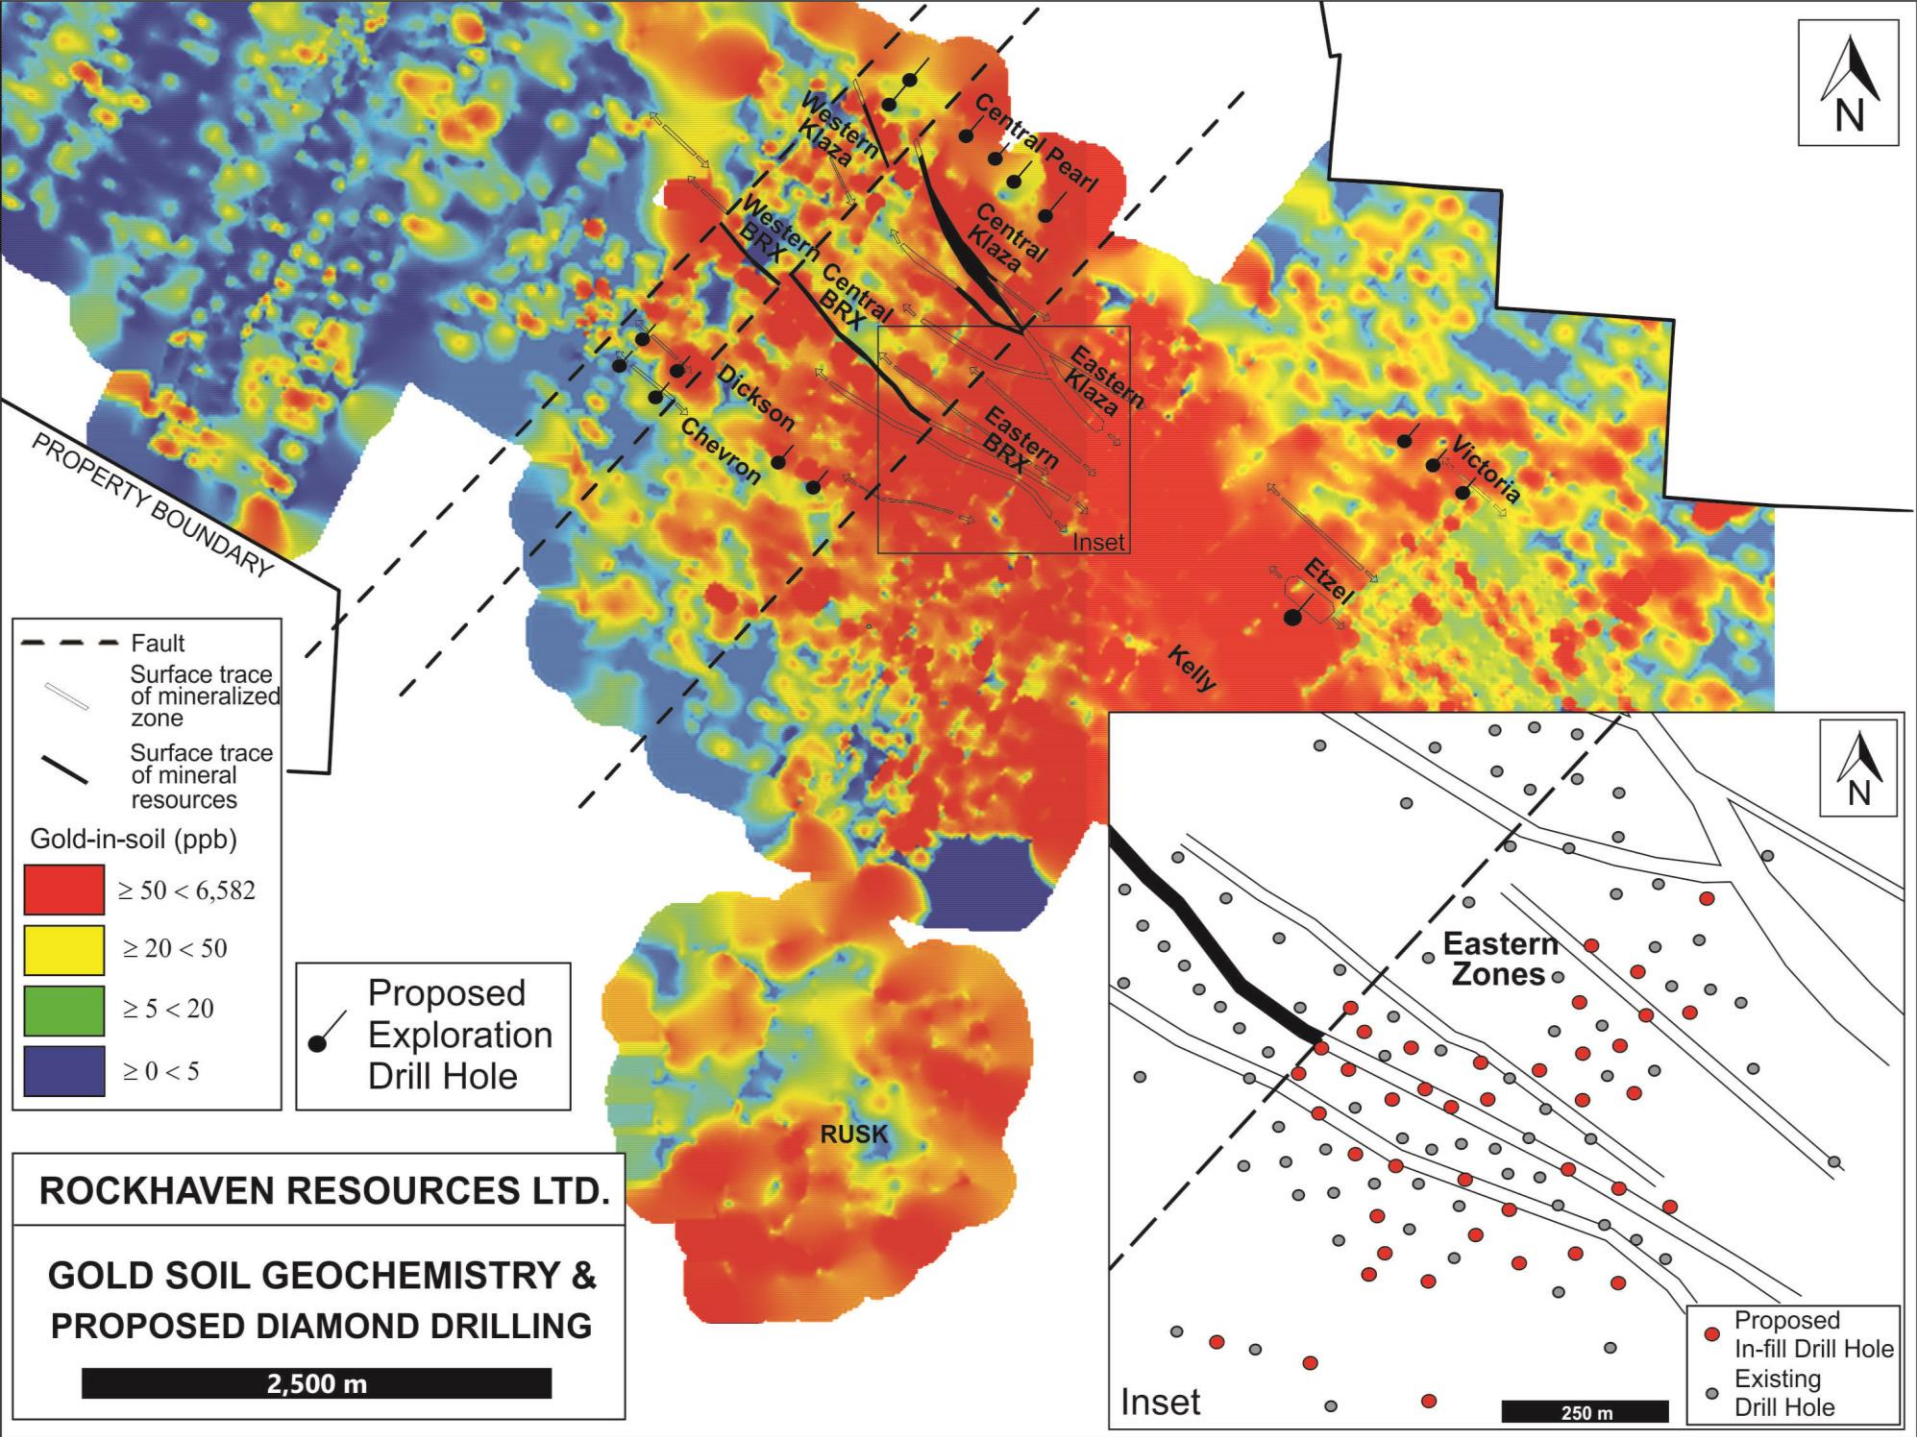

Exploration Drilling

- 4000 m of exploration drilling in 19 holes to better delineate zones that parallel the current mineral resource
- The exploration objective is to ready these zones for closer spaced drilling to add new open pit and underground resources

In-fill Drilling

- 5000 m of in-fill drilling in 38 holes to facilitate deposit modelling and resource estimation of near surface mineralization in the Eastern zones
- Updated deposit models will provide a geological framework for evaluation of deeper mineralization
- The core of the Eastern zones was estimated in a previous resource calculation but was not included in the current resource model due to changes in the geologic model in these zones. Further work is required to re-evaluate these zones
- Metallurgical testwork suggests approximately 81% of the gold in the Eastern zones can be recovered by direct cyanidation

PROPERTY BOUNDARY

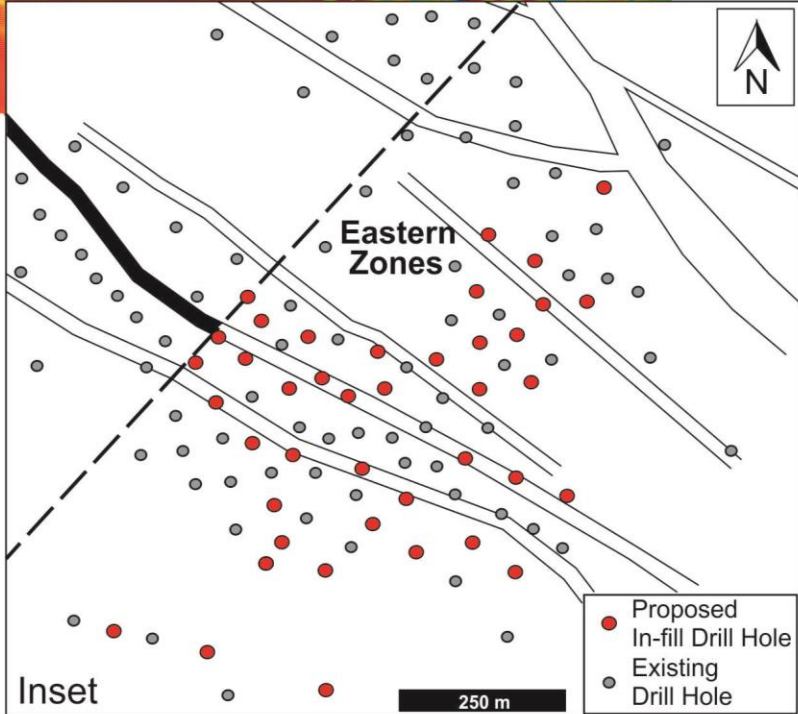

- - - Fault
 - Surface trace of mineralized zone
 - Surface trace of mineral resources
- Gold-in-soil (ppb)
- Red: $\geq 50 < 6,582$
 - Yellow: $\geq 20 < 50$
 - Green: $\geq 5 < 20$
 - Blue: $\geq 0 < 5$

Proposed Exploration Drill Hole

ROCKHAVEN RESOURCES LTD.

GOLD SOIL GEOCHEMISTRY & PROPOSED DIAMOND DRILLING
